

HerWILL: AI for Digital Safety Datathon

Grading and Evaluation Rubric

The total evaluation score for the Datathon is **100 marks**, divided into three major components:

- **Result Performance:** 40%
- **Code Quality:** 25%
- **Final Presentation:** 35%

This evaluation structure ensures that participants are assessed not only on model performance but also on **engineering quality, methodological rigor, and ability to communicate their work effectively.**

1. Result Performance (40%)

The result score is determined by a **custom metric called F1NOP**, which rewards both **high predictive performance and efficient model design.**

F1NOP Score:

A composite score combining:

- **F1 Score** (classification performance)
- **Number of Parameters** (model efficiency)

Models achieving **high F1 scores while maintaining lower parameter counts** will receive higher scores.

Marking Breakdown (40%)

Criterion	Marks	Description
F1NOP Score	40	Based on Kaggle leaderboard ranking using the custom F1NOP metric
Evaluation will be based on final Kaggle leaderboard submissions.		

2. Code Quality and Technical Implementation (25%)

Participants must submit their **complete code notebook (.ipynb) or .py file**, including preprocessing, training, and evaluation steps.

Marking Breakdown (25%)

Criterion	Marks	Description
Data Pre-processing & Feature Engineering	5	Proper cleaning, transformation, and meaningful feature construction
Model Implementation	5	Correct and efficient implementation of the machine learning model
Code Clarity & Organization	5	Logical structure, modular code, readable formatting

| 501 Johnson Ferry Rd. | Suite 250, Building E | Marietta, GA 30068 |

Email: Leadership@herwill.org | Website: www.herwill.org | LinkedIn: <https://linkedin.com/company/Herwill>

Criterion	Marks	Description
Documentation & Method Explanation	5	Clear comments explaining approach, model, and decisions
Reproducibility	5	Code runs correctly and reproduces submitted results

The submitted notebook must be **well-structured, executable, and properly commented**.

3. Final Presentation (35%)

The Top 7 participants will present their solutions to the judging panel.

Each presentation must not exceed 5 minutes.

The presentation should clearly demonstrate the participant's **understanding, methodology, and reasoning behind their model design**.

Marking Breakdown (35%)

Criterion	Marks	Description
Problem Understanding	5	Clear explanation of the problem and objectives
Methodology	10	Explanation of preprocessing, modeling strategy, and workflow
Model Selection & Rationale	5	Justification for chosen model(s) and design decisions
Results & Evaluation	5	Interpretation of results and performance
Challenges & Improvements	5	Discussion of limitations and possible improvements
Clarity of Presentation & Communication	5	Ability to clearly explain and defend the approach

Participants must demonstrate both **technical understanding and communication ability**.

Important Note

While Kaggle leaderboard performance plays a major role, **final rankings are not determined solely by model scores**. Judges will also consider **code quality, reproducibility, clarity of methodology, and presentation quality** to determine the **Top 3 winners**.
